

LiquaLED Offers an LED Lighting System for Every Spa

SloanLED's LiquaLED product line offers full-featured, color-changing LED systems for the complete spectrum of today's spas – from the most basic entry-level spa to your most exclusive, premium models.

Centered on LiquaLED's proprietary controllers and software programs, the line offers three distinct systems and price points. Simply select the system that best matches each spa model's LED lighting requirements. LED lighting components include cluster main lights (in three sizes), bullet "spot" lights (in three configurations), perimeter lights and skirt lights. Controller choices include two stand-alone system controllers, and 3 self contained LED cluster lights with its own on-board controller (two stand-alone, one expandable).

Use the below system matrix to help you determine the best system for any given spa. The enclosed product data sheets offer complete product descriptions, features and benefits, and technical specifications. Your SloanLED Territory Manager can assist you in the evaluation, design and prototyping of all your LED systems.

LiquaLED Spa Lighting Systems Matrix
